

User can name location, select radius, and decide whether they want to set their phone on vibrate or silent mode for their saved location

After having a location set, click the "+" button and save location.

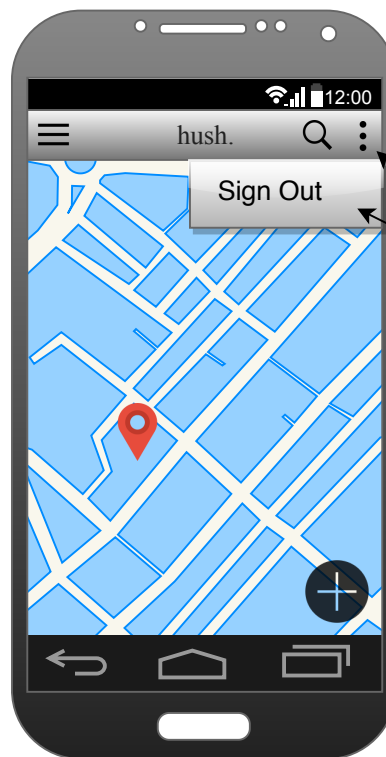

User can manually press a position on the map to set the desired location.

User can search for specific location to set a ping on the map with TomToms Map API
or

Menu after Authentication.
(Landing page)

User can select the drawer layout button (top left) and gain access to their account, current HushZones, Calendar, and More(TBA).

Selecting the menu bar brings a drop down with the ability to sign out of current account.
